

VI. Rubric/Scoring Guide

Each criterion is scored on a 5-point band. The five criteria sum to a maximum of 25 points. (The syllabus does not fix lab-rubric criteria; this five-criteria, 25-point scheme is a judgment call you can revise.)

Criteria	Exemplary (5)	Proficient (4)	Developing (3)	Beginning (2)	Incomplete (1)
Installation & Editor Launch	Godot installed and launched independently; helped a peer troubleshoot.	Godot installed and launched independently, no help needed.	Installed and launched with minor guidance.	Installed and launched only with substantial help.	Editor not installed or not launched.
Project Creation & File Organization	Project created and named per convention; folder structure clean and logical.	Project created and correctly named; organized.	Project created; naming or organization partly off convention.	Project created but poorly named or disorganized.	No project created.
Scene Tree Construction	Root plus 2+ well-chosen child nodes; hierarchy correct and purposeful.	Root plus at least 2 child nodes; hierarchy correct.	Root plus 1 child node, or minor hierarchy error.	Root node only, or incorrect hierarchy.	No scene tree built.
GitHub Submission & Verification	Pushed and tagged lab1; verified reopen; screenshot included in the repo.	Pushed and tagged correctly; project verified to reopen intact.	Pushed, but not tagged or reopen not verified.	Committed locally but not pushed, or wrong repository.	Work not committed or pushed.
Panel Identification & Lab Conduct	Named all panels and their purposes; actively supported paired troubleshooting.	Named the main panels and their purposes; participated well.	Named most panels; participated.	Named few panels; limited participation.	Could not identify panels; did not participate.
Total	_____ / 25				

VII. Reflection

- a. Which editor panel was least familiar to you, and how did you work out what it does?
Every single editor panel was not familiar but the panel most unfamiliar was the signals, I didn't know what anything did, thankfully it wasn't used for the activity, the rest of the panels were pretty straight forward.
- b. What installation, setup, or Git issue did you or your pair-partner run into, and how did you resolve it?
We didn't have any issues, the instructions were clear and easy to follow.
- c. In your own words, what is the relationship between a node, a scene, and the scene tree?
A node is a fundamental building block for making games, a scene is where you can edit and make use of your nodes and a scene tree is a collection of scenes.
